Dates to Remember

September 2017

• 28 - 10ct: JoMUN

October 2017

- 3-4: Secondary PTC
- 4-5: Primary 3-Way Conf.
- 6: Term 1 Ends
- 16: Start of Term 2
- 24: UN Day Assembly

THE ORYX

The weekly newsletter of Windhoek International School

FROM THE DIRECTOR

The Tuck Shop

As you may know, we have been looking for a business to take over the running of the Tuck Shop when Peter D'Alton leaves next month. The deadline for tenders was Monday of this week and we were delighted to receive 21 of them.

A panel met to choose the most promising tenders and we eventually whittled an initial short list of 11 down to five. Interviews have been taking place yesterday and today and we will finish the process on Monday. I hope to be able to announce an appointment in next week's newsletter.

Peter MacKenzie Director

FINAL WEEK OF AFTERNOON ACTIVITIES UNTIL 16 OCTOBER

Afternoon Activities will end on Friday this week (29th Sep). Next week the SPT Conferences and Field Trips make it unviable. We will start again on the 16th of October.

Congratulations to Sarah Tibazarwa in 7B for solving last week's puzzler! Great job! The solution can be found here.

Here is the new puzzler: You are given two water containers. One holds 4 litres and the other holds 9 litres. You have unlimited water. You need to measure exactly 6 litres of water. How will you do it?

Answers can b e submitted t o pfarrell@wis.edu.na

New puzzles can also be address.

PRIMARY PRINCIPAL

The Three-Way Conference times have been posted on the blog. Last week your child(ren) should have brought home an invitation for the conferences. Now comes the preparation. The children are preparing by reviewing and selecting the work they would like to share during the conferences. They are thinking about what they are doing well and what areas they'd like to improve. It is important for parents to prepare for the conferences as well. Here are some suggestions that you can do before, during and after the conferences:

BEFORE	DURING	AFTER
 Discuss the conference with your child: What is going well in school? What would make school better? Make notes of questions you'd like to ask about your child's progress. Make notes of concerns that may need to be discussed at a separate conference. 	 Turn your cell phone off or put your phone on silent so that you can devote your full attention to your child. Siblings should not be part of the conference. They may wait outside the classroom or in another area of the room. Show interest in your child to speak. Allow your child to speak. Direct questions to your child and about your child and about your child s work. Contribute your goals for your child to feel relaxed. Enjoy this undivided time with your child. At the end of the conference, if needed, make another appointment with the teacher. 	 Discuss goals set with your child and monitor progress towards achieving goals. Continue to encourage your child. Communicate with the classroom or the single subject teacher with any concerns, questions or follow-up on points discussed during the conference.

I look forward to seeing you next week during the conference days. Remember that Thursday is a not a normal school day for Primary students. I hope you find the submitted to the same conferences to be a positive and informative experience.

> Regards, **Beth Smith**

SECONDARY PRINCIPAL

Parents: What do you look for first when you receive your child's report?

Students: What do you look for first, when you receive your report?

If you ask any parent if they are interested in their child's progress at school, they will of course say 'yes'. But what do parents want to see? Grades? Praise? Content covered? Strengths and weaknesses?

We are currently in the process of reviewing our reporting procedures. At the moment, parents get a detailed report at the end of each semester, outlining the student's strengths and areas in need of improvement. A grade is awarded for achievement and one for effort. Does this really reflect the child's real ability? Or does it comment more on what the teacher thinks the child is achieving?

Traditionally, we report on content areas the child is expected to master. Does he get 50% right in the questions we ask or 83%? This is, however, no longer the main aim in equipping young people with the necessary skills for learning.

In Secondary School, we are implementing an approach called "Approaches to Teaching and Learning" where the following three components are integrated around the learner, the teacher and the guardian/parent: WHAT do we want to learn? HOW best will we learn? - How will we KNOW what we have learned? It is not about learning mere facts, but rather about learning the skills to be able to use what we have learnt in a different situation. The IB has identified 5 different categories of skills that we want our young people to learn:

If we can equip our youth with these skills, we will have succeeded in guiding and preparing them to become independent and compassionate learners.

In our future reporting to parents about their child(ren)'s progress, we will attempt to refer more to the ability of the learner to acquire these skills rather than merely passing on facts and content learnt in lessons. This is a process that needs all participants in the learning environment (learners, teachers, parents/guardians) to be open and accepting of the change of "learning" and will take time to settle in our everyday teaching and learning routines.

Regards, Maggie Reiff

CAS Project

Môreson Classical Fundraising

CAS stands for Creativity, Action and Service and it is a programme within the IBDP. Each student is to participate in an activity for each strand, i.e. activities that include creativity, action, and service. Additionally, students are required to plan a project; this project should include at least two of the CAS strands.

What CAS does is teach students to take responsibilities in life. The Diploma Programme as it is, is challenging and requires a lot of responsibility, dedication and commitment. The CAS programme acts as a counterbalance to the academic aspect of the Diploma Programme, but at the same time assists students in taking action for themselves. It teaches them to be individual and organize as well as participate in events that are beneficial for themselves as well as their community.

The CAS project, specifically, seems to be the most challenging part of the CAS programme for most students, and this comes with reasons. When organizing a project, students must learn to work together as a team, while also being able to work with people outside of school. Allocating equal responsibilities is one of the most important things when it comes to teamwork. Especially when organizing a bigger project, which is to include many people from outside of the school, it is important to think of everything, and one person alone cannot do this. When responsibilities are divided up equally, everyone's contribution will lead to the desired outcome.

When working on a project, it is also required to raise sponsorships from organizations or firms from outside the school, if needed. In order to convince companies to sponsor a student's event, a lot of meetings, calls, and patience are needed. When calling as a student, explaining your project, it is common to be waved aside and not taken seriously. This is where the art of delegation is called for. Calls and emails may be ignored, especially if students only try it once. From personal experience, I can tell you that calling so much up to the point where the people almost get annoyed with you calling is important if your aim is to win a sponsorship. Emailing will not help, they are often ignored; however, it serves as a good starting point. When sending an email explaining your event and the sponsorship opportunity, it gives you a more substantial grounding on which to base a follow-up phone call. When you cold-call organizations, they may not listen to what you have to say and rather ask you to please send all the information to a given email address. This way, if you have already sent an email, it makes you seem more professional, more prepared, and also allows you to keep the person's attention for longer; this way you can then ask to schedule a meeting.

A previously organized CAS project was the Christopher Aiff Football Tournament, where students in the IBDP organized a football tournament, of which the proceeds went to the cancer association. The tournament was held in the memory of Christopher Aiff, a former student at WIS who passed away due to cancer. An upcoming event organized by Year 13 students as a CAS project is the "Môreson Classical Fundraising". It will take place on the 21st of October and will be held in the Aula of DHPS. This will be a fundraising concert for the Môreson Special School, where classical music will be played on a variety of instruments. Tickets will be available from the following students: Selina, Christine, Mila, Warren, Micaela, and Emilia at \$100 a ticket. Please come and support Môreson Special School and the CAS programme at WIS. *Selina Kinne*

Idioms!

A harsh time in every English learner's life. Especially when you have to create your own idioms. Sadly this time the year 9's got the short end of the stick and had to use all the possible brain power they could muster. We were given two or so lessons to come up with an idiom and a proper meaning.

Some people had a harsher time than others. Sometimes they thought they came up with a new idiom but sadly it was already created and they went back to work. Eventually everyone completed and created amazing idioms with some incredible meanings. Such as : He took a walk with a kangaroo, meaning: living a lie (created by Aaron, PJ and Lukene). Turning sand into diamonds, meaning: making something out of nothing (created by Li and Kennedy), Fighting the setting sun, meaning: fighting a battle you can't win (created by Olivia and Ruveldo). Even though it was hard and time consuming I'm sure everyone had a great time and hope to do it again.

Olivia Shino Year 9B

A zoom into IGCSE Biology at WIS

Dissections are notable and educational facets of the Biology curriculum. This allows students to engage in the content of the subject by gaining knowledge with handson experience.

By exploring similar structures of animals they will be able to apply their knowledge to their understanding of the human body. Students usually look forward to dissections, their attention is heightened and the learning experience causes an enhanced ability to recall and understand the subject matter.

The Year 11 Biology students explored the structure of the eye last week during their lessons. With great care and excitement, they dissected the goat's eye.

It was an eye-opening exercise and the pupils gained an in-depth knowledge of its structure. *Corinne Smit*

Heroic Effort from U13 Football Team

The U13 boys team almost pulled off a truly monumental upset in the U13 Hopsol sponsored boys football league. We performed superbly and fought hard for 50 mins playing some great counterattacking football and gave DTS a huge shock. *Final score WIS 1 DTS 2*
